🚨 我的猫现在要不要立刻去医院

> **写给谁**：正在担心、但不确定"是不是该现在就去"的主人。不需要任何医学背景。
>
> **怎么用**：从第 1 节开始，**一条一条对**。对上任何一条，就不要再往下读了——直接联系兽医。
>
> **性质**：循证参考资料，**不是诊断**。它不能代替能亲手摸到这只猫的兽医。
>
> **写作日期**：2026-07-21

⛔ 第 1 节 · 对上任何一条，现在就联系兽医

不要先查资料，不要等到明天早上，不要等"看看会不会自己好"。

呼吸

- **张口呼吸、伸着脖子呼吸、肚子明显一起一伏地用力**
- 呼吸又快又浅，或者呼吸时有明显声音
- 舌头或牙龈发紫、发白

排尿（公猫尤其）

- **反复进猫砂盆、蹲着用力，却尿不出来或只有几滴**
- 在猫砂盆里叫、舔下体、碰肚子就痛

> **这是本页最需要被记住的一条。** 尿道阻塞可以在**一天之内**致命，但它是**可以治的**——真正的问题在别处，见第 3 节。

突然瘫、突然不能走

- **后腿（或一条腿）突然拖着、冰凉、叫得很痛**
- 脚垫颜色变白或发紫

吃与吐

- **完全不吃**（一口都不吃）
- 反复呕吐、连水都留不住
- 明显脱水、极度虚弱、站不起来

神经

- 抽搐、肌肉不停发抖、意识不清

- **突然看不见了**：撞家具、找不到食盆、瞳孔放大且不随光线收缩

中毒（接触过就算，不必等症状）

- **百合**：任何部位、任何品种、哪怕只是舔了花粉或花瓶里的水
- **含除虫菊酯／氯菊酯（permethrin）的狗用驱虫滴剂**
- 防冻液、人用止痛药（布洛芬、对乙酰氨基酚）、老鼠药

其他

- 体温明显偏低、身体摸起来发凉
- 昏倒过（哪怕已经缓过来）
- 严重外伤、被车撞、高处坠落——**即使看起来没事**

⚠️ **这份清单的正确用法。** 它列的是「**不要等**」的情况，**不是「不在表上就可以等」**。

你的猫、你的观察、你的直觉，都比一张通用清单更了解它。觉得不对劲就打电话——这本身永远是一个合理的决定。

📞 第 2 节 · 决定去了，路上做这几件事

1. **先打电话**，说明"我认为是急诊"和最主要的那个症状。医院可以提前准备，也会告诉你该去哪。
2. **确认这家医院现在有没有急诊能力**——很多诊所夜间不接急诊，白跑一趟就是在浪费时间。
3. **路上整理这些**（不用写得漂亮，能说清就行）：
   - 症状**从什么时候**开始，是突然还是逐渐
   - **最后一次正常吃饭、正常排尿**是什么时候
   - 正在吃的所有药、保健品、最近换过的粮
   - 有没有可能接触到植物、药品、化学品
   - 有旧的化验单就带上，或拍照
4. **如果猫呼吸困难，尽量减少折腾**：放进航空箱、少搬动、路上保持安静。

⚠️ **不要在家给猫喂任何人用药。** 布洛芬和对乙酰氨基酚对猫有毒。

💰 第 3 节 · 一件几乎没人告诉主人、但可能改变结局的事

这一节不是急诊指引，是**在你被要求做决定时该知道的数字**。可以之后再读。

3.1 尿道阻塞：大多数死亡是决定，不是疾病本身

英国初诊数据，1108 例记录完整的公猫尿道阻塞里：

> **329 只（29.6%）在这次发病中死亡——而其中 285 只（88.0%）是安乐死**（Beeston 2022，PMID 35199370）

近九成的死亡，是在诊室里做出的决定，通常关于费用、复发和预后——而这三件事，往往没有人替主人量化过。

这不是在说那些决定是错的。 复发是真的，费用是真的。这是在说：**这个决定值得拿到真实的数字。**

关于复发（这是最常被提到的理由）：39 只猫的长期随访中，特发性组再阻塞 **8/22（36%）**，尿石组 3/10（30%），尿栓组 3/7（43%）；再阻塞是安乐死最常见的理由，占 **8/39（21%）**（Gerber 2008，PMID 17719255）。

⚠️ n=39、转诊人群、2008 年——把它当数量级，不要当精确复发率。

3.2 动脉血栓栓塞（突然后腿瘫）：同样的模式

250 只在英国普通诊所处理的猫动脉血栓栓塞病例中，**153 只（61.2%）在初诊时即被安乐死**。而在**获得治疗机会**的猫里，**68/97（70.1%）存活超过 24 小时**（Borgeat 2014，PMID 24237457）。

⚠️ **这不是在说不该安乐死。** 这个病极度疼痛、预后确实差，安乐死常常是正确且仁慈的选择。**它是在说：这个决定经常在最初几分钟内做出，而当时没有人替这位主人量化过预后。**

3.3 一个便宜、可以直接问的检查

突然后腿瘫时，**测患肢与全身的静脉血糖差**可以把血栓和神经／骨科原因区分开。ΔGlu 以 **30 mg/dL** 为界，在猫中**敏感度 100%、特异度 90%**（Klainbart 2014，PMID 25041102）。

两次血糖仪读数，不用麻醉、不用影像。

⚠️ 22 只血栓猫 vs 20 只对照，单中心、样本小，**不能替代主治兽医的判断**。写在这里是因为它便宜、快，而且是主人可以问出口的一个具体问题。

⚠️ 第 4 节 · 三件我必须对你说实话的事

4.1 「不吃多久算危险」——这个数字不存在

猫长时间不进食会引发**肝脂沉积**，这是一个独立的、致死率不低的急症。但**文献里只说"prolonged anorexia"（长时间厌食），从来没有量化过是几天。**

所以：**一只停止进食的猫应该被看，我不会给你一个"可以等 N 天"的阈值——因为那个数字是编的。**

4.2 「张口呼吸」——教条正确，但没有数据

猫（不像狗）不会良性地喘气，这是标准的兽医教学内容。**但本项目从三个角度检索过，找不到任何量化研究。**

所以：**这条警告照给，但我不会说"研究表明"**，因为没有。

4.3 没有任何单一数值能替你判断

71 只因呼吸窘迫送急诊的猫，**入院乳酸值与存活、住院时长、生命体征、病因均无关联**（Gilday 2022，PMID 36176706）。

不要让任何一个数字——乳酸、呼吸次数、体温——替代整体判断，也不要用其中任何一个来安慰自己。 这条同样适用于你在家数呼吸。

🤔 第 5 节 · 「我是不是太紧张了？」

这可能是你此刻最真实的顾虑。有两件事值得知道。

第一，人医的证据显示：症状自查工具的误差方向是「过度就医」，不是「延误」。 也就是说，这类工具让人更容易多跑一趟，而不是更容易在家等——**它没有制造延误**（Chambers 2019 等，见知识库 §3.1）。

第二，但这条证据来自人，不是猫。 猫看病自费、猫不会说哪里痛——**主人的基线本来可能就偏向"再等等"**。人医的误差方向能不能搬到猫身上，**没有人测过。**

⚠️ 所以本页不承诺「你不会白跑」。它承诺的是另一件事：**白跑一趟的代价，几乎总是低于晚到一次的代价。**

附录 A · 文献清单

本页所有数字均来自以下文献，PMID 与 DOI 可直接核对。

> ⚠️ 本清单由脚本从归档的 PubMed 记录生成，非手工录入。

- Gerber, et al. Guarded long-term prognosis in male cats with urethral obstruction. J Feline Med Surg 2008;10(1):16-23. PMID 17719255. DOI

附录 B · 我明确查不到的事

以下是文献中真实的空白。任何人给你一个填补这些空白的数字，那都是编的。

1. **猫厌食多少天会发生肝脂沉积** — 检索过，无天数阈值
2. **张口呼吸在猫的量化预后意义** — 极普遍的临床教条，无发表数据
3. **鼻出血／失血多严重算急诊** — 无量化数据
4. **主人使用分诊工具后是否真的改善了结局** — 人医研究测的是准确度，不是结局；猫的完全未测
5. **转运本身的风险** — 有机制记载，但population 数据给出的死亡比值比是 1.3（95% CI 0.37 - 4.51，p = 0.680），**不显著**；不能量化

原文摘录（source excerpts）

> **这一节是本页的证据本身。** 正文是解释，可以争论；下面这些句子是原文，逐字未经翻译或改动，
>
> 并由 `tools/dr_drill.py leg1` 在每次提交时比对归档的 PubMed 记录。

PMID 17719255 · Gerber B 2008

> Of the 22 cats with idiopathic urethral obstruction, eight (36%) re-obstructed after 3-728 days (median 17 days).
>
> Of 10 cats with urolithiasis, three (30%) re-obstructed after 10, 13 and 472 days, respectively.
>
> Of the seven cats with urethral plugs, three (43%) re-obstructed after 4, 34 and 211 days, respectively.
>
> Recurrent signs of lower urinary tract disease including obstruction were common in cats with urethral obstruction (20/39; 51%) and occurred in the same frequency irrespective of the primary cause of the obstruction.
>
> Recurrent obstruction (14/39; 36%) was the most common reason for euthanasia and was performed in 8/39 (21%) cats.
>
> Forty-five male cats with urethral obstruction or lower urinary tract signs referable to urethral obstruction were included in the study.

PMID 21147474 · Fitzgerald KT 2010

> As little as 2 leaves or part of a single flower have resulted in deaths.
>
> It should be pointed out that the whole plant-petals, stamen, leaves, and pollen are toxic.
>
> Prognosis is excellent if fluid diuresis is started before anuric renal failure has developed.
>
> Successful treatment includes initiation of fluid diuresis before the onset of anuric renal failure.
>
> ⚠️ This is a narrative review, not primary data. The "2 leaves" figure is reported without an attached citation in the abstract; retrieve the full text before quoting it as a measured threshold.

PMID 24237457 · Borgeat K 2013

> Over 98 months, 250 cats were identified with ATE.
>
> At presentation, 153 cats (61.2%) were euthanized, with 68/97 (70.1%) of the remaining cats (27.2% of the total population) surviving >24 hours after presentation.
>
> Of these, 30/68 (44.1%) survived for at least 7 days.
>
> For cats that survived ⩾7 days, median survival time was 94 (95% CI, 42-164) days, with 6 cats alive 1 year after presentation.
>
> Although 153/250 cats were euthanized at presentation, 6 cats survived >12 months. No factors were identified that predicted euthanasia on presentation.
>
> Cats with ATE presenting to GP are usually euthanized at presentation, but survival times >1 year are possible.

PMID 25041102 · Klainbart S 2014

> ΔGlu cutoffs of 30 mg/dL and 16 mg/dL, in cats and dogs, respectively, corresponded to sensitivity and specificity of 100% and 90% in cats, respectively, and 100% in dogs.
>
> Client-owned cats and dogs were divided into 3 respective groups: acute limb paralysis because of ATE (22 cats and 9 dogs); acute limb paralysis secondary to orthopedic or neurologic conditions (nonambulatory controls; 10 cats and 11 dogs); ambulatory animals presented because of various diseases (ambulatory controls; 10 cats and 9 dogs).
>
> ΔGlu and %ΔGlu are accurate, readily available, diagnostic markers of acute ATE in paralyzed cats and dogs.

PMID 26748857 · Beer KS 2016

> Cats in the UO-A group had a significantly longer duration of clinical signs ($P = 0.001$), and were more likely to have a history of previous urethral obstruction ($P = 0.011$), have a heart murmur ($P = 0.002$), have a gallop rhythm ($P = 0.005$), and have lower blood pressure ($P = 0.007$) compared to those in the UO group.
>
> All UO cats survived to discharge, whereas 4/17 (23.5%) UO-A cats were euthanized ($P = 0.013$).
>
> Seventeen cats with urethral obstruction and severe anemia (group "UO-A") that required transfusion were identified via medical record database search. Thirty cats with urethral obstruction and mild or no anemia (group "UO") were included as controls.
>
> A history of previous urethral obstruction and longer duration of clinical signs may be important risk factors for severe anemia in UO cats.

PMID 35199370 · Beeston D 2022

> From the study cohort of 237 825 male cats, there were 1293 incident cases.
>
> The estimated UO incidence risk during 2016 was 0.54 (95% CI: 0.51-0.57).
>
> Death during a UO episode was 329/1108 (29.6%), and 285/329 (88.0%) deaths involved euthanasia.
>
> Overall repeat catheterization rate was 253/854 (29.6%).
>
> Antibiotics were administered to 641/1108 (57.9%) cases.
>
> Antibiotics were commonly prescribed in cats for treatment of UO despite minimal evidence in the clinical records of bacterial cystitis.
>
> Repeat catheterization was common and case fatality rate during a UO episode was high.

PMID 35448426 · Ricci E 2022

> In this study, the clinical response to treatment with intravenous lipid emulsion (ILE) for nine cats intoxicated with permethrin has been described.
>
> The enrolled cats showed acute onset of seizures, tremors and hypersalivation that were partially controlled with the administration of benzodiazepines and intravenous fluid therapy.
>
> After ILE treatment, all cats recovered rapidly and were discharged within 24-54 h.
>
> ⚠️ Nine cats, no control group. Cited for the clinical picture, not as evidence of treatment efficacy.

PMID 36176706 · Gilday C 2022

> Admission lactate concentration was not associated with survival, duration of hospitalization, vital parameters, or underlying etiology for respiratory distress.
>
> In contrast, lactate clearance was significantly associated with survival and length of hospitalization.
>
> Seventy-one cats presented in respiratory distress to the ER at a university teaching hospital were enrolled in this retrospective study.

PMID 38244269 · Manchester RB 2023

> The prevalence of lower urinary tears was 0.92% in UO cats.
>
> Cats with lower urinary tears were significantly less likely to survive to discharge and had a longer period of hospitalization than cats without tears.
